

# Week-6: Code-along

Heng Javier

20/09/2023

## II. Code to edit and execute using the Code-along-6.Rmd file

### A. for loop

#### 1. Simple for loop (Slide #6)

```
# Enter code here
for(x in c(3,6,9)){
  print(x)
}
```

```
## [1] 3
## [1] 6
## [1] 9
```

#### 2. for loops structure (Slide #7)

```
# Left-hand side code: for loop for passing values
for(x in 1:8) {print(x)}
```

```
## [1] 1
## [1] 2
## [1] 3
## [1] 4
## [1] 5
## [1] 6
## [1] 7
## [1] 8
```

```
# Right-hand side code: for loop for passing indices
for(x in 1:8) {
  y<- seq(from=100,to=200,by=5)
  print(y[x])}
}
```

```
## [1] 100
## [1] 105
```

```
## [1] 110
## [1] 115
## [1] 120
## [1] 125
## [1] 130
## [1] 135
```

### 3. Example: find sample means (Slide #9)

```
# Enter code here
# 1. determine what to loop over
sample_sizes <- c(5, 10, 15, 20, 25000)
# 2. pre-allocate space to store output
sample_means <- double(length(sample_sizes))
for (i in seq_along(sample_sizes)) {
  sample_means[i] <- mean(rnorm(sample_sizes[i]))
}
sample_means
```

```
## [1] -0.263670027 -0.219148637 -0.240516972  0.164132999 -0.005463717
```

### 4. Alternate ways to pre-allocate space (Slide #12)

```
# Example 3 for data_type=double
sample_sizes <- c(5, 10, 15, 20, 25000)
sample_means <- rep(0, length(sample_sizes))
sample_means
```

```
## [1] 0 0 0 0 0
```

```
# Initialisation of data_list
data_list <- vector("list", length = 5)
data_list
```

```
## [[1]]
## NULL
##
## [[2]]
## NULL
##
## [[3]]
## NULL
##
## [[4]]
## NULL
##
## [[5]]
## NULL
```

## 5. Review: Vectorized operations (Slide #18)

```
# Example: bad idea!
# Vector with numbers from 7 to 11
a <- 7:11
# Vector with numbers from 8 to 12
b <- 8:12
# Vector of all zeros of length 5
out <- rep(0L, 5)
# Loop along the length of vector a
for (i in seq_along(a)) {
  # Each entry of out is the sum of the corres
  out[i] <- a[i] + b[i]
}
out
```

```
## [1] 15 17 19 21 23
```

```
# Taking advantage of vectorization
# Vector with numbers from 7 to 11
a <- 7:11
# Vector with numbers from 8 to 12
b <- 8:12
out <- a + b
out
```

```
## [1] 15 17 19 21 23
```

## B. Functionals

### 6. for loops vs Functionals (Slides #23 and #24)

```
# Slide 23
# Initialise a vector with the size of 5 different samples
sample_sizes <- c(5, 10, 15, 20, 25000)
# Create a functional- function inside a function
sample_summary <- function(sample_sizes, fun) {
  # Initialise a vector of the same size as sample_sizes
  out <- vector("double", length(sample_sizes))
  # Run the for loop for as long as the length of sample_sizes
  for (i in seq_along(sample_sizes)) {
    # Perform operations indicated fun
    out[i] <- fun(rnorm(sample_sizes[i]))
  }
  return(out)
}
```

```
# Slide 24
#Compute mean
sample_summary(sample_sizes, mean)
```

```
# Compute median
sample_summary(sample_sizes,median)
# Compute sd
sample_summary(sample_sizes,sd)
```

C. while loop (use when length of sequence is unknown, more general than for loop)

7. while loop (Slides #27)

```
# Left-hand side code: for loop
for(i in 1:5){
  print(i)
}
```

```
## [1] 1
## [1] 2
## [1] 3
## [1] 4
## [1] 5
```

```
# Right-hand side code: while loop
i <- 1
while (i <= 5) {
  # body
  print(i)
  i <- i + 1
}
```

```
## [1] 1
## [1] 2
## [1] 3
## [1] 4
## [1] 5
```
